## Important Information

All the furniture is listed with their in-game name and price, and put into their respective category which is *named the same as their in-game one!*

The table of contents will redirect you to the respective furniture category!

Currently there are two big chaotical in-game categories: “Decor” with 18 items and “New Collection” with 46 items. As they have all sorts of furniture mixed there, I decided to create new categories for them so it’s easier to browse for you, but also assign them their own *distinctive icon* so you know they belong to one of these two big categories in case you are interested in purchasing them.

The item with this icon means that it is found on the “**Decor**” in-game category!

The item with this icon means that it is found on the “**New Collection**” in-game category!
